Building the few-shot prompt template

With your examples in a structured format, it's now time to create the few-shot prompt template! You'll create a template that convert the question-answer pairs into the following format:

Question: Example question

Example Answer

All of the LangChain classes necessary for completing this exercise have been pre-loaded for you.

Instructions

100 XP

- Complete the prompt for formatting answers so it includes the question and answer keys.

- Create the few-shot prompt using examples and example_prompt; complete the list of input variables based on the suffix provided.

script.py

```python
# Complete the prompt for formatting answers

example_prompt = PromptTemplate.from_template("Question: {question}\n{answer}")

# Create the few-shot prompt

prompt_template = FewShotPromptTemplate(

    examples=examples,

    example_prompt=example_prompt,

    suffix="Question: {input}",

    input_variables=["input"],

)

prompt = prompt_template.invoke({"input": "What is Jack's favorite technology on DataCamp?"
})

print(prompt.text)
```
